

STRATEGIC VEGETATION MANAGEMENT SOLUTIONS

Minimize risk and realize efficiencies with Strategic Vegetation Management Solutions.

ENDVR Energy helps LDCs across Ontario manage that risk with a data-first approach that finds problems before they become faults & puts your maintenance dollars where they matter most.

We pair satellite imagery & AI-driven analytics with field knowledge to score vegetation risk across your entire network. The result is a clear, prioritized picture of where to trim now, where to plan, & where to leave alone.

WHAT WE DELIVER

Network-Wide Risk Assessment

Using satellite & AI vegetation analytics

Prioritized Work Plans

Target highest-risk spans first

Encroachment & Growth Tracking

Along rights-of-way, year over year

Budget Optimization

So trim cycles follow actual risk, not the calendar

Reliability & Compliance Reporting

Ready for Regulators & Board

Outage & Storm-Hardening Insight

Reduce tree-caused faults

COVERAGE

Overhead lines across rural & urban networks, on public ROW & private property within easements & permissions.

Stop trimming on a fixed cycle & start trimming where the risk actually exists.
